

DSRAZOR Solution: Drag-n-Drop Group Membership

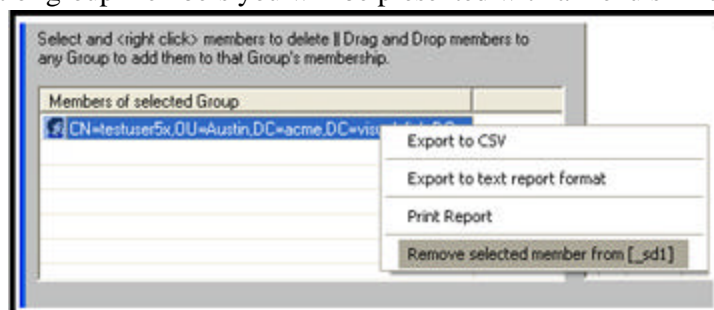

Managing Group Membership is an ongoing requirement for many network administrators. DSRAZOR helps simplify management of your groups. With DSRAZOR's visual scripting interface you can easily design applets that assist with adding and removing group members. Each group membership management applet uses drag-n-drop action to add members to groups and simple right-click action to remove members.

The following image shows *testuser2a* being dragged. Releasing *testuser2a* on any group will produce a prompt verifying the addition of *testuser2a* as a member of the selected group. Note: You can select one or multiple users when dragging/adding to group membership.

If you right-click on a list of group members you will be presented with a menu similar to the following:

From this menu you can select to remove the highlighted group member(s).

DSRAZOR for Windows eases your group membership management via an easy to use drag-n-drop method.
